DEMO_SCRIPT

DEMO_SCRIPT — Speaker Script

> Companion to `DEMO_DECK.md`. The deck declares what appears on screen; this document declares what the speaker says, when to read slide text aloud verbatim, when to bridge between slides, and where to stay silent during the three live segments.
>
> Authored 2026-04-22 by Jiesen Huang for the DKU International Education Innovation Forum, 2026. Total runtime ~10 minutes.

How to use this file

1. The script never re-prints slide text that the speaker should already read off the screen. When a slide is meant to be read aloud, the script says so and marks tempo only.
2. Bridging lines — sentences the speaker adds between slides, not shown on screen — appear *in italics* inside pull-quotes.
3. Beat markers: `〔beat · Ns〕` = deliberate pause; `〔···〕` = extended silence (hold the room). Silence is load-bearing — do not fill it.
4. Typographic emphasis (**bold**) marks the stressed word, not the loudest one.
5. The three live segments have prepared narration only at seams. The default state during live is silence.

Speaking arc

```
0:00–1:00   Act I   · Slide 1, 2
hook + frame
1:00–2:30   Act II  · [live instrument, Press 1]
no slides
2:30–4:20   Act III · Slide 3, 4, 5, 6
context engineering
4:20–7:40   Act IV  · Slide 7 → [live build]
orchestrator posture
7:40–9:10   Act V   · [live instrument, Press 2]
Yisu selects a chip
9:10–10:00  Act VI  · Slide 8, 9
audit + close
```

ACT I — Hook & Frame (0:00 – 1:00)

【SLIDE 1 — HOOK】

Walk to the lectern in silence. Do not greet. Do not thank. Look once at the back row. Then read the slide.

> "The robot can make the broth now."

〔beat · 2s〕

> "The question that has not been asked is — **who teaches the robot to know whether the broth is good?**"

〔beat · 3s — let the question hang〕

> *(quieter, slower)* "That teacher is a contract — a standard of judgment — written before the robot was invited in."

〔…〕 Do not explain the word *contract*. Plant it. Move.

【SLIDE 2 — THE INSTRUMENT AS A THINKING MACHINE】

Bridge — one sentence, before reading the slide:

> *"What I just called a contract has a shape tonight. It is an instrument. It is called the AI Discourse Stress-Tester. It does not answer questions about AI and education. It **presses** them."*

Read the three numbered questions at the pace of someone reading a short poem — not a memo. Let the Roman numerals do the work.

〔after III, brief pause, then point to the "+ one question" line〕

> *"And then — a fourth move. One sentence, in Yisu's register, that the claim was trying not to have asked of it."*

The closer stays on screen. Do not read it aloud — the slide says it. Simply turn.

ACT II — Live Press 1 (1:00 – 2:30)

【LIVE — browser, Press 1】

Bridge before switching screens:

> "*Rather than describe the instrument — let me press one claim now.*"

Click a pre-selected chip. Return hands to sides. Do not narrate the streaming output.

〔streaming · ~70s silence〕

When the stream completes, walk to the screen. One gesture at the verified badges:

> "Every italicised sentence you just read — came from writings Yisu published. Nothing else was quoted. The instrument refuses to render anything it cannot verify against the source."

One gesture at the final question:

> "The fourth beat — the question — is the one the instrument will not answer. It leaves it with the room."

〔beat〕 Cut back to slides.

ACT III — Context Engineering (2:30 – 4:20)

【SLIDE 3 — CONTEXT, AUTHORED FIRST】

Bridge:

> "*Before I press a second claim, I owe you the how. Because the interesting part of this build was* ***not the prompting****.*"

Read the slide body at a slower tempo than the hook. Four words, four beats:

> "Direction. Non-negotiable rules. Verification. Phases."

After the closer, add the translation — this is the only place in the talk to name the jargon:

> "*In the current vocabulary of AI builders, this has a name. Context engineering. Translated plainly: I wrote the direction, the standards, and the phase contracts — and* ***then*** *the agent could move.*"

【SLIDE 4 — TECH, CHOSEN ONCE】

Bridge:

> "*Three decisions, made before the first line of code. First — the stack.*"

Read the `picked` column at clip pace, without emphasis — it is a list of ordinary names. Then shift register, slower, for `refused`:

> "No state management library. No icon library. No component library beyond primitives. No database. No auth. No analytics."

〔beat〕

> *(reading the closer)* "Dependencies were a cap — **not** a budget."

If a small laugh lands on *refused* — accept it silently. Do not explain.

【SLIDE 5 — DESIGN, DECLARED FIRST】

Bridge:

> "*Second — the design.*"

Read the title:

> "One screen. One voice. One model call per press."

Do not read the full `picked` column — the audience is already looking at it. Point instead at `refused`, one finger, rhythmic:

> "No icons. No illustrations. No gradients. No shadows. No cards. No dashboard chrome."

〔beat · 1s〕

> "Typography is the design. Everything else is **temptation**."

〔beat〕 This is the driest line in the deck. Do not smile at it. Let the audience do that.

【SLIDE 6 — DELIVERY, IN PHASES】

Bridge:

> "*Third — the path.*"

Read the title and the closer; do not narrate the table. After ~4s of letting the audience read the table:

> "Each phase opens with an epic. Each phase closes with a verification script. The spec is the signature."

〔beat〕

> *"You will notice Phase 6 is marked — 'tonight, live'. That is where I am going next."*

ACT IV — Live Build (4:20 – 7:40)

【SLIDE 7 — THE NEW COLLABORATION POSTURE】

Bridge:

> *"So — the posture. Where I sit. Where the agent sits."*

Read the slide:

> "Two jobs stay with the human. **Coordination.** And the decision at the seam — where human and machine meet."
>
> "Everything else — the typing, the lookup, the drafts, the wiring, the tests — goes to the agent."
>
> *(slower, final line)* "For the next three minutes, I will not type. I will guard."

Do not read "Orchestration begins now." Let the slide say it while the screen switches.

【LIVE — Phase 6 build, 3 minutes】

Screen: editor + terminal + browser. Open `doc/phase-6/epic.md`, scroll to acceptance criteria, hold 5s in silence so the back row can read. Open

`CLAUDE.md`, scroll to "Invariants a Claude Code agent must respect", hold 3s.

Hand the task to Claude Code in one line derived from the epic. Say nothing while it plans.

Prepared narration for seams only — use if and only if triggered:

- If the agent proposes a boundary-crossing change:

  > "The spec forbids that. Pulling it back."

- If verification fails or the prompt misfires:

  > "That is not a code error. That is a prompt contract that is too loose. Tightening it and pressing again."

- At the moment the ruler renders on Axis I: *One gesture at the ruler. No words.*
- If the rehearsed small failure does not occur naturally:

> "This build obeyed the contract tonight. The version I rehearsed last night did not — and that is where the seam was. That is where I came back in."

Do not improvise beyond these lines. Silence is the correct default in this act.

ACT V — Live Press 2 (7:40 – 9:10)

【LIVE — instrument, Yisu's chip】

Return to the main page.

> *"One more press. This one not by me."*

Gesture to Yisu:

> "周老师 — please, choose one."

(If delivering the talk fully in English:)

> "Yisu — please choose one."

〔streaming · ~70s silence〕

Do not rescue a weak reading. A weak reading is still a reading produced under contract — that is the point. Let Yisu speak first, even if only a syllable.

ACT VI — Audit & Close (9:10 – 10:00)

【SLIDE 8 — AUDIT】

Read `main` plainly, no affect:

> "Every quotation you heard tonight was verbatim. If it was not verbatim, it was not shown."

〔beat · 2s〕

Read the accent line quieter, slower:

> "A verification rule gated the render. The system enforced academic integrity — not the operator."

〔beat · 2s〕 Do not rush past *academic integrity* — that is the word this room is built to hear. This is also the moment where the idea planted in Slide 1 — *contract* as a standard of judgment — is shown to have been rendered as a machine-readable rule.

【SLIDE 9 — CLOSE】

Read at the pace of the hook. Same pace. Closing the loop.

> "Orchestration is not abandoning the work."

〔beat · 2s〕

> "It is designing the workflow **so carefully** — that you only have to re-enter at the broken seams."

〔… 3s silence 〕

Step back from the lectern. The slide stays on. Do not say *thank you*. Do not invite questions. Leave the stage, or stand in stillness until the moderator speaks.

排练笔记

1. **不要记稿,记节拍。**全稿 spoken 约 750 词,关键不在字句而在节奏标 记。先跑节拍再跑内容。

2. "有趣"只在四个点:Slide 4 的 "Dependencies were a cap — not a budget"、Slide 5 的 "temptation"、Live Build 的 seam 修复台词、 Slide 7 的 "I will guard"。其他地方越平淡越好,反差让笑点自动成 立。
3. **最大风险是 Live Build 那 3 分钟**。排练时必须准备两种结局:agent 乖 / agent 出错。出错的版本是更好的版本——prepared line 都写好了, 观众会看到 orchestrator posture 真的在工作。不要回避失败。
4. **Yisu press 那段是全场最脆弱的 90 秒**。如果 reading 确实弱, 不要救。deck 已经给了台阶:"a weak reading is itself a demonstration"。但你口头不能说这句,只能用沉默承接。
5. **最后三秒的沉默比整稿都重要**。不要吞掉它。

Delivery contract (non-negotiable)

- No opening greeting. No "good evening." No thank-you at close. No Q&A invitation.
- No narration over streaming output during Press 1 or Press 2.
- No improvised lines during Live Build beyond the four prepared seam-lines above.
- Every quotation referenced on stage must be one the instrument has actually rendered from the corpus during the live press — never a quote recalled from rehearsal.
- If the instrument fails to render during a live segment, do not narrate a rescue. Acknowledge the failure in one sentence, return to slides, and continue.
